HL stands for "Hypotenuse, Leg" (t he longest side of a right-angled triangle is called the "hypotenuse", the other two sides are called "legs"). It means we have two right-angled triangles with. the same length of hypotenuse and ; the same length for one of the other two legs.; It doesn't matter which leg since the triangles could be rotated. For example:

Key to Geometry Workbooks. Here is a non-intimidating way to prepare students for formal geometry. Key to Geometry workbooks introduce students to a wide range of geometric discoveries as they do step-by-step constructions. Using only a pencil, compass, and straightedge, students begin by drawing lines, bisecting angles, and reproducing segments.

In higher level geometry games, students will discover shapes they may not have learned before, such as the pentagon and parallelogram, as well differentiating 2D and 3D shapes. Students who are ready to kick it up a notch can play games focused on edges and vertices, measuring angles, fractions, and even using coordinates on a map.

Four-dimensional geometry is Euclidean geometry extended into one additional dimension. The prefix "hyper-" is usually used to refer to the four- (and higher-) dimensional analogs of three-dimensional objects, e.g., hypercube, hyperplane, hypersphere. n-dimensional polyhedra are called polytopes. The four-dimensional cases of general n-dimensional objects are often given special names, such as ...

Ask open ended questions that have multiple answers. How to Analyze Using a Geoboard. Ask students to make a picture or design. It needs to be a little complicated, with rubber bands crossing each other. If they bring back something too simplistic, tell them they have to use at least 10 rubber bands. Then, they analyze it. Here is an example:
