RUMUS EXCEL | SOFTWARE ENGINEERING BENJAMIN ENGLE 1159

In engineering, a factor of safety (FoS), also known as (and used interchangeably with) safety factor (SF), expresses how much stronger a system is than it needs to be for an intended load. Safety factors are often calculated using detailed analysis because comprehensive testing is impractical on many projects, such as bridges and buildings, but the structure's ability to carry a load must be...

Miner's rule is one of the most widely used cumulative damage models for failures caused by fatigue. It is called 'Miner's rule' because it was popularized by M. A. Miner in 1945. In this article, we will explain what it is and how it is related to other more advanced cumulative damage models in ALTA.

Miner's Rule and Cumulative Damage Models
