Diagnosing and Changing Organizational Culture provides a framework, a sense-making tool, a set of systematic steps, and a methodology for helping managers and their organizations carefully analyze and alter their fundamental culture. Authors, Cameron and Quinn focus on the methods and mechanisms that are available to help managers and change agents transform the most fundamental elements of their organizations. The authors also provide instruments to help individuals guide the change process at the most basic level—culture. *Diagnosing and Changing Organizational Culture* offers a systematic strategy for internal or external change agents to facilitate foundational change that in turn makes it possible to support and supplement other kinds of change initiatives.

Aswath Damodaran, distinguished author, Professor of Finance, and David Margolis, Teaching Fellow at the NYU Stern School of Business, have delivered the newest edition of *Applied Corporate Finance*. This readable text provides the practical advice students and practitioners need rather than a sole concentration on

debate theory, assumptions, or models. Like no other text of its kind, *Applied Corporate Finance, 4th Edition* applies corporate finance to real companies. It now contains six real-world core companies to study and follow. Business decisions are classified for students into three groups: investment, financing, and dividend decisions. Focuses on "the identification and acquisition, or transfer, through licensing, of technology that is owned by another by virtue of an intellectual property right." - page 5. Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall

paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century. Finally in paperback: the New York Times bestseller by the acclaimed, bestselling author of *Start With Why* and *Together is Better*. Now with an expanded chapter and appendix on leading millennials, based on Simon Sinek's viral video "Millenials in the workplace" (150+ million views). Imagine a world where almost everyone wakes up inspired to go to work, feels trusted and valued during the day, then returns home feeling fulfilled. This is not a crazy, idealized notion. Today, in many successful organizations, great leaders create environments in which people naturally work together to do remarkable things. In his work with organizations around the world, Simon Sinek noticed that some teams trust each other so deeply that they would literally put their lives on the line for each other. Other teams, no matter what incentives are offered, are doomed to infighting, fragmentation and failure. Why? The answer became clear during a conversation with a Marine Corps general. "Officers eat last," he said. Sinek watched as the most junior Marines ate first while the most senior Marines took their place at the back of the line. What's symbolic in the chow hall is deadly serious on the battlefield: Great leaders sacrifice their own comfort--even their own survival--for the good of those in their care. Too many workplaces are driven by cynicism, paranoia, and self-interest. But the best ones foster trust and cooperation because their leaders build what Sinek calls a "Circle of

Safety" that separates the security inside the team from the challenges outside. Sinek illustrates his ideas with fascinating true stories that range from the military to big business, from government to investment banking. A handbook for physicians, residents and students in the emergency department to help manage patients. Evidence based concise algorithms.
