*Are America's schools broken? Education Hell: Rhetoric vs. Reality* seeks to address misconceptions about America's schools by taking on the credo 'what can be measured matters.' To the contrary, Dr. Bracey makes a persuasive case that much of what matters cannot be assessed on a multiple choice test. The challenge for educators is to deal effectively with an incomplete accountability system-while creating a broader understanding of successful schools and teachers. School leaders must work to define, maintain, and increase essential skills that may not be measured in today's accountability plans. Berlin here continues his unique history of American college composition begun in his *Writing Instruction in Nineteenth-Century Colleges* (1984), turning now to the twentieth century. In discussing the variety of rhetorics that have been used in writing classrooms Berlin introduces a taxonomy made up of three categories: objective rhetorics, subjective rhetorics, and transactional rhetorics, which are distinguished by the epistemology on which each is based. He makes clear that these categories are not tied to a chronology but instead are to be found in the English department in one form or another during each decade of the century. His historical treatment includes an examination of the formation of the English department, the founding of the NCTE and its role in writing instruction, the training of teachers of writing, the effects of progressive education on writing instruction, the General Education Movement, the appearance of the CCCC, the impact of Sputnik, and today's "literacy crisis."

*McHugh: Psychology and the Healthy Organization* Psychology and the Healthy Organization is an exploration of the concept and practice of the healthy organization. It will:  
sect; Explore the concept of organizational health and well-being; sect; Highlights the need for organizations to be healthy in order to cope effectively with the diverse forces impacting upon them; sect; Highlight the differing perspectives of organizational health; sect; Present the

argument which illustrates the rhetoric that exists in the exposition of the healthy organization; and sect; Present an integrated model which will enable those concerned with the well being of individuals and organizations to work towards the creation of a healthy organization; Through a critical analysis of the concept and the existing literature, this book highlights the fact that the healthy organization is a multi-dimensional concept, which encompasses numerous aspects of organizational functioning. *Psychology and the Healthy Organization* argues for a holistic approach to conceptualising, understanding and creating a healthy organization. *Psychology and the Healthy Organization* is an essential text for students of organizational psychology, management and organizational health. This book compares and contrasts how different firms approach marketing within the same country. It concerns issues revolving around marketing as a form of rhetoric and marketing as a living reality for firms who practice it and contains cutting edge thinking from expert commentators on the marketing scene worldwide. It uses 16 case study examples of marketing practice in eight countries and shows whether marketing allegiance is openly proclaimed but in practice merely a rhetorical device or whether it is deeply embedded in organizational culture. Local government in Britain is undergoing fundamental transformation. This book explores the impact of these changes upon the attitudes, behaviour and job satisfaction of the managers most affected by them. On the basis of a detailed review of recent research findings and theoretical debates, it outlines the major changes affecting local government organizations and the duties and responsibilities of those working within them. This provides the context for a detailed empirical case study which explores the extent to which a rhetoric of 'new managerialism' is supported by a reality of change. In the first paragraphs of this volume, the author identifies an "authenticity paradox": that the purported real-worldness of a learning environment, technique, or task is so rhetorically potent that educators frequently call attention to it in pedagogical conversations to legitimize their undertakings, while at the same time,

terms such as "real-world" and "authentic" do not require (and even resist) precise delineation. Using the language of authenticity as a keyhole through which to view contemporary educational theory, Petraglia draws on theories of cognition, education, and knowledge to articulate the interdisciplinarity of "constructivism" and to expose the unsettling combination of constructivism's social scientific and epistemological commitments. He argues that a full-bodied embrace of constructivist theory requires that educators forgo "knowledge as we know it" and recommends a "rhetorical" approach to constructivist instruction that recognizes the cultural, social, and behavioral practices which play an enormous role in defining learners' "real worlds." Applying this critique to the field of educational technology, the author does not merely lament constructivist theory's current shortcomings, but offers a means by which these shortcomings can be engaged and, perhaps, overcome. It is now more than three decades since the historic Supreme Court decision on desegregation, *Brown v. Board of Education*. Thomas Sowell takes a tough, factual look at what has actually happened over these decades -- as distinguished from the hopes with which they began or the rhetoric with which they continue, Who has gained and who has lost? Which of the assumptions behind the civil rights revolution have stood the test of time and which have proven to be mistaken or even catastrophic to those who were supposed to be helped? Stemming from four years of ethnographic research, media analysis of over 750 national news articles published in the 2010s, and decades of the author's professional and personal immersion in the Rio Grande Valley of south Texas, *Rhetoric and Reality* illuminates a place at the heart of our national conversation: the U.S.-Mexico border. K. Jill Fleuriet contrasts the rhetoric of national political and media discourse with that of local border leaders in economics, health care, politics, education, law enforcement, philanthropy, and activism. As she deconstructs the common narrative of a border in need of external intervention to control corruption, poverty, sickness, and violence, Fleuriet engagingly illustrates the range of

regional organizing, local development strategies, and community responses in the borderlands that ultimately situate the Rio Grande Valley as the "true North" of the U.S. national compass—where the Valley goes, the rest of the country soon will follow. *Rhetoric and Reality* asks us to question our own assumptions, especially about those areas that drive national decisions about resource allocation, economic development and national security. Offers a critical evaluation of existing and emerging approaches to applied conflict prevention that involve nontraditional actors ranging from the corporate sector and NGOs to regional and multilateral economic and political organizations. The volume suggests best practices for individuals within these organizations to use the array of political, economic, social and developmental instruments available to them. *Why* fears about a looming student loan crisis are unfounded—and how they obscure what's really wrong with student lending. College tuition and student debt levels have been rising at an alarming pace for at least two decades. These trends, coupled with an economy weakened by a major recession, have raised serious questions about whether we are headed for a major crisis, with borrowers defaulting on their loans in unprecedented numbers and taxpayers being forced to foot the bill. *Game of Loans* draws on new evidence to explain why such fears are misplaced—and how the popular myth of a looming crisis has obscured the real problems facing student lending in America. Bringing needed clarity to an issue that concerns all of us, Beth Akers and Matthew Chingos cut through the sensationalism and misleading rhetoric to make the compelling case that college remains a good investment for most students. They show how, in fact, typical borrowers face affordable debt burdens, and argue that the truly serious cases of financial hardship portrayed in the media are less common than the popular narrative would have us believe. But there are more troubling problems with student loans that don't receive the same attention. They include high rates of avoidable defaults by students who take on loans but don't finish college—the riskiest segment of borrowers—and a dysfunctional market where

competition among colleges drives tuition costs up instead of down. Persuasive and compelling, *Game of Loans* moves beyond the emotionally charged and politicized talk surrounding student debt, and offers a set of sensible policy proposals that can solve the real problems in student lending. Intended for teachers of college composition, this history of major and minor developments in the teaching of writing in twentieth-century American colleges employs a taxonomy of theories based on the three epistemological categories (objective, subjective, and transactional) dominating rhetorical theory and practice. The first section of the book provides an overview of the three theories, specifically their assumptions and rhetorics. The main chapters cover the following topics: (1) the nineteenth-century background, on the formation of the English department and the subsequent relationship of rhetoric and poetic; (2) the growth of the discipline (1900-1920), including the formation of the National Council of Teachers of English, the appearance of the major schools of rhetoric, the efficiency movement, graduate education in rhetoric, undergraduate courses and the Great War; (3) the influence of progressive education (1920-1940), including the writing program and current-traditional rhetoric, liberal culture, and expressionistic and social rhetoric; (4) the communication emphasis (1940-1960), including the communications course, the founding of the Conference on College Composition and Communication, literature and composition, linguistics and composition, and the revival of rhetoric; and (5) the renaissance of rhetoric and major rhetorical approaches (1960-1975), including contemporary theories based on the three epistemic categories. A final chapter briefly surveys developments through 1987. (JG) A major revision of our understanding of long-range bombing, this book examines how Anglo-American ideas about "strategic" bombing were formed and implemented. It argues that ideas about bombing civilian targets rested on--and gained validity from--widespread but substantially erroneous assumptions about the nature of modern industrial societies and their vulnerability to aerial bombardment. These

assumptions were derived from the social and political context of the day and were maintained largely through cognitive error and bias. Tami Davis Biddle explains how air theorists, and those influenced by them, came to believe that strategic bombing would be an especially effective coercive tool and how they responded when their assumptions were challenged. Biddle analyzes how a particular interpretation of the World War I experience, together with airmen's organizational interests, shaped interwar debates about strategic bombing and preserved conceptions of its potentially revolutionary character. This flawed interpretation as well as a failure to anticipate implementation problems were revealed as World War II commenced. By then, the British and Americans had invested heavily in strategic bombing. They saw little choice but to try to solve the problems in real time and make long-range bombing as effective as possible. Combining narrative with analysis, this book presents the first-ever comparative history of British and American strategic bombing from its origins through 1945. In examining the ideas and rhetoric on which strategic bombing depended, it offers critical insights into the validity and robustness of those ideas--not only as they applied to World War II but as they apply to contemporary warfare. This title, first published in 1987, provides an authoritative account of both the science and the politics of acid rain. A comprehensive and relevant work, this is an important guide for students of geography, environment and sustainability and energy policy. Platform Economics tackles head on the rhetoric surrounding the so-called 'sharing economy' which has muddied public debate and has contributed to a lack of policy and regulatory intervention. In the Indian context. The Phaedrus is well-known for the splendid mythical panorama Socrates develops in his second speech, and for its graphic descriptions of erotic behavior. This book shows how the details of the myth and the accounts of interaction between lovers are based on a carefully articulated metaphysical structure. It follows the dialogue as narrated, showing how passages that may not appear relevant to metaphysics have

been deployed to heighten the vision of reality that Socrates develops in his second speech and concludes with an Epilogue in which the metaphysical principles adumbrated in the dialogue are ordered and briefly developed. This Epilogue helps illustrate the continuity between the Phaedrus and subsequent dialogues, such as the Parmenides, Sophist, Statesman, and Philebus, in which methodological and metaphysical concerns are dominant for Plato. As a result, new connections emerge between the metaphysical domain in Plato's thought and the more visible and vibrant areas of the psychology of eros and practical rhetoric. --

Back cover. John Chrysostom, the golden mouth, the greatest preacher in the early church and a key figure during the transition from the ancient to the Byzantine and medieval worlds, is known as a vehement critic of the Jews. In this study, Robert Wilken presents a new interpretation of John's homilies against the Jews, setting them in the context of the pluralistic society of fourth-century Antioch and against the tradition of ancient rhetoric. In reading John's homilies, Wilken argues, we must not impose on them the anti-Jewish attitudes of medieval times, when Christianity was the dominant force in the West and Judaism was a minority religion. In John's time, Christianity was only one, and by no means the most self-assured, of the cultural forces in Antioch. It had to compete with an established Jewish community and with the classical pagan tradition that underlay education and public life. In 363, the Roman emperor Julian, who had apostatized Christianity to embrace the traditional pagan religion, attempted to rebuild the Jewish Temple in Jerusalem. He terrified the Christians, who saw in the Temple's ruins proof of the truth of their religion. Wilken examines John's sermons against this atmosphere of intense religious rivalry and lively polemic between Christians, Jews, and pagans. His book calls not only for a fresh look at John Chrysostom but also for a reconsideration of the continued importance of Judaism in late antique society and in the history of Christianity. Its conclusions will be of interest to historians and theologians, and to participants in the present-day Jewish-

Christian dialogue. Medieval assumptions about the nature of the representation involved in literary and historical narratives were widely different from our own. Writers and readers worked with a complex understanding of the relations between truth and convention, in which accounts of presumed fact could be expanded, embellished, or translated in a variety of accepted ways. In 2003, the United Nations adopted a common rights-based approach to development in their efforts to promote an international standard of human rights throughout the world. The approach emphasizes economic, social, and cultural rights, but plays down the role of civil and political rights in development.

Intergovernmental and non-governmental agencies operate only at the invitation and sufferance of their hosts, and states retain full sovereignty and control over their territory; and the direct promotion of civil and political rights by foreign organizations has seemed beyond the ability of multilateral development agencies. But as *Development and Human Rights* shows, UN agencies have begun to take on a remarkable set of development priorities that, while carefully circumscribed and defined, constitute greater involvement in a state's internal affairs than anyone would have considered in the past. In this book, Joel E. Oestreich presents the first full-length study of how international agencies evaluate the rights situation in a single country, and the first study to look at both the good and the bad in a rights-based approach. It looks particularly at the human rights challenges faced in India, considering the work of five UN agencies: UNICEF, the UN Development Programme, the World Bank, the UN Fund for Population Activities, and UN Women. Over the course of the book, Oestreich summarizes how the UN navigates this difficult political terrain, and how effectively these policies are being implemented.

*Development and Human Rights* ultimately considers how rights-based approaches fit in the traditional discourse on human rights, and the ability of these agencies to initiate meaningful change on state behavior in the rights arena. *Reality and Rhetoric* is the culmination of P. T. Bauer's observations and reflections on Third World economies over a

period of thirty years. He critically examines the central issues of market versus centrally planned economies, industrial development, official direct and multinational resource transfers to the Third World, immigration policy in the Third World, and economic methodology. In addition, he has written a fascinating account of recent papal doctrine on income inequality and redistribution in the Third World. The major themes that emerge are the importance of non-economic variables, particularly people's aptitudes and mores, to economic growth; the unfortunate results of some current methods of economics; the subtle but important effects of the exchange economy on development; and the politicization of economic life in the Third World. As in Bauer's previous writings, this book is marked by elegant prose, apt examples, a broad economic-historical perspective, and the masterful use of informal reasoning. What kind of claim is being made, or accusation leveled when such a term is used? How do the dimensions and parameters of meaning facilitated by each term work in the management and distribution of power?". Debating the problems of inner cities, this book examines the concept of the inner city, examples of decline and renewal and asks whether the "inner city" is more than a rhetorical device. It also looks beyond the political and theoretical notion of the problems to its impact on people's lives. `This is an admirable book which can be recommended to students with confidence, and is likely also to become an indispensable source of reference for those researching fact construction' - Discourse & Society How is reality manufactured? The idea of social construction has become a commonplace of much social research, yet precisely what is constructed, and how, and even what constructionism means, is often unclear or taken for granted. In this major work, Jonathan Potter offers a fascinating tour of the central themes raised by these questions. Representing Reality overviews the different traditions in constructionist thought. Points are illustrated throughout with Since 1945, the role of the president in shaping domestic and foreign policy has changed dramatically. Though the prodigious growth of the federal

bureaucracy under the Executive Branch reflects much of this change, bureaucratic response to the major issues of the past three decades has been ineffective or nonexistent, and a notable parallel development has been the increasing use of public commissions in the policymaking process. Dr. Tutchings studies more than 100 public commissions using a model of the policymaking process that includes demands, decision and information costs, and policy results and outcomes. Reviewing the results of the commissions as reflected in presidential support of recommendations (via proposed legislation) and in congressional response, he notes that their membership has typically been dominated by government/corporate elites: as this membership has become more pluralistic, there has been a sharp decline in the contributions of the commissions to the policymaking process. Perhaps the most significant contribution of the book is its detailed development of the concept of rhetorical policy as a first step in the policymaking process. Thoughtfully and thoroughly reviews the past, analyzes the separate subject approach, and outlines a proposal for a new general education program that would transform the middle level school. Together with local actors, many governments, regional organizations and the UN are embracing preventive action as a viable path towards sustainable peace. The contributions to this volume trace conflict prevention efforts in various regional contexts and explain how preventive thinking is being successfully mainstreamed into the activities of regional organizations and the UN. Early modern Spain's insistent rhetorics of nation and kingship, of a monolithic body of shared values and beliefs, especially in respect of racial and gender stereotypes, and of a centralized and ostensibly absolutist legislative apparatus did not map unproblematically onto the complex topography of everyday life. This volume explores the extent to which these rhetorics and the ideology they helped to construct or underpin reflected or failed to reflect the realities of social, economic, and cultural life. It sets against their typically exorbitant claims the lived, messy, and sometimes contradictory experience of
